

TANK

PUMP

**TANK
STATION**

If you have a pump that feeds a remote tank , you need this.

RemoteFloat allows a float at your tank to control a pump that is located **very** far away. **Yes, really.**
(15km Line of Sight!)

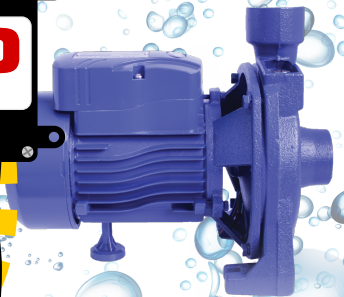

RemoteFloat uses 2 x AAA batteries at the tank side so you don't need a solar panel or anything else except your float
(2 year battery life!)

RemoteFloat is economical. You will **NOT** solve this particular problem at a lower price.

RemoteFloat has a built-in 30Amp relay at the pump side so you don't need extra relays or contactors to control smaller pumps
(up to 1.1KW)

RemoteFloat is IP64 sealed so you don't need any additional enclosure
